

Officer notes – 3.1/LB/3/12

Permit revised in accordance with guidance issued Sept 2012

Euromix keep a large daily monitoring sheet covering all aspects of dust and other monitoring.

The site fitter undertakes a monthly planned check on pressure relief valves, socks, alarms and shut off valve. Changes made where necessary.

Silo Filling

- The lock at the bottom of each silo needs to be unlocked by hand before loading can start. This lock also starts the filters at the top of the silo.
- There are pressure sensors at low and high level in silo which cut off the delivery to prevent overfilling
- The pressure relief valves will automatically stop the delivery and an audible and visual alarm will activate. Euromix would then investigate the problem and repair.

Waste is taken away by an outside haulier and recycled.

Yard is swept weekly by IBC

Water available using a hosepipe for damping down purposes.

No need for wheel washing etc as yard kept very clean.

A maintenance programme is currently being drafted which will include records. ISO14001 currently being applied for.
