- Control of Giant Hogweed, Himalayan Balsam, bracken and other problematical weed infestations also undertaken.

## JAPANESE KNOTWEED CONTROL & ERADICATION

### Are you a landowner with Japanese Knotweed?

As a landowner, it is an offence to allow Japanese Knotweed to invade neighbouring properties. Any part of this invasive species, even the smallest trimming, is capable of growing into a new plant.

### Are you a contractor or property developer with Japanese Knotweed on site?

Knotweed is capable of penetrating and damaging even concrete surfaces. Eradication is essential for the longevity and success of your work.

### Consultation and advice

All enquiries welcome. Reports can be prepared for further negotiation and planning.

### Treatment and techniques

The most effective treatment period is early in the growing season. Up-to-date techniques employed using tried and tested safe methods which are non-hazardous to the environment including waterways.

### Training

All our staff are fully trained and comply with the relevant British Standards including the Wildlife and Countryside Act (1991) and the Environment Protections Act (1990) / Control of Pesticides Regulations (1996).

### Quotations

Competitive written quotations supplied.
